# FLIP CHART

FC-1 Body Hardware and Specialty Fastener Identification Flip Chart

The Auveco Flip Chart, covering over 1200 items, is divided by product group into 32 different sections. The chart not only contains actual size pictures that make it easy to select the correct part, but OEM numbers, pertinent specifications and dimensions, colors, etc. are also included. All of which aids in identifying the correct Auveco part numbers and unit package quantities for our most popular body hardware and specialty fasteners.

Flip Charts are packaged in plastic-wrapped bundles with 10 charts per bundle.

## FOR USING THE AUVECO CATALOG

We have tried to make this catalog as easy as possible to use while still providing you with all the necessary information required to identify the part that you need. The features listed below should help you to quickly find the proper section of the catalog and determine the correct Auveco part number.

1. The color-coded pages signify various sections which are as follows:
   - BLUE - Metric Items (Cap Screws, Machine Screws, Body Bolts, Tapping Screws, Hex Nuts, Free Spinning Washer Nuts, Pushnut Bolt Retainers, "U" & "J" Nuts, Washers, Retaining Rings, Grease Fittings and miscellaneous items).
   - BEIGE - Electrical Accessories (Solderless Terminals & Connectors, Wire & Loom, Battery Terminals, Heat Shrink Tubing, Fuses, Pigtails & Sockets, Miniature Bulbs, Switches, etc.)
   - GREEN - Assortments, Cabinets, Bins & Racks (AuvecoPaks, Body Hardware Master Assortments, Small Drawer & Large Drawer "Fix-Kits", Quik-Select, Quik-Select II and "FP" 4 Pack Assortments)
   - GRAY - Key Blanks & Accessories (Key Blanks, Tumblers, Springs & Lock Cylinders)
   - PINK - Import Car Body Hardware (Non-threaded fasteners cataloged by import manufacturers from Acura to Volvo.)

2. We have three different types of indexes in the front of the book to assist you.

   Pictorial QUICK INDEX - the pictures tell you at a glance which pages to turn to. The section numbers correspond to the section numbers printed in the upper outside corner of each page. You can also easily see the sequence of the catalog - threaded fasteners, common non-threaded fasteners, electrical accessories, brass and grease fittings, rivets, kits, rubber products, glass shop supplies and window motors, trimming sundries and fasteners, domestic application body hardware, key blanks, import application body hardware, miscellaneous products and tools.

   ALPHABETICAL INDEX is helpful when checking to see if we carry a specific product line. Popular categories are in bold type.

   NUMERICAL INDEX for when you have the Auveco part number and need to know which page it is on.

3. Wherever practical, we have shown the parts illustrated actual size. Unless the illustration: is labeled "Not Actual Size", is a typical illustration accompanying a chart or is obviously not actual size, you should be able to set a part on top of the illustration to positively identify it.

4. To assist you in the identification of "Xmas Tree" Retainers, we have included a Specification Chart that lists the type of retainer, the head diameter(s), the stem diameter, the stem length and the page number that the actual size illustration and application information is shown. This chart appears on pages 390 - 397.

5. At the back of the catalog are two OEM Part Number to Auveco Part Number Cross References. One of these interchanges is broken down by OE manufacturer i.e. General Motors, Ford, etc. The other interchange combines all OEM numbers together and is sequenced strictly in alpha-numeric order regardless of the manufacturer.

# FASTENER TERMINOLOGY

Bolt: An externally threaded, headed fastener. Difference between a bolt and a screw is: a bolt is generally used through a hole with a mating nut; a screw is used in a threaded hole without a nut.

Class Of Thread: A system used to distinguish thread tolerance differences. Classes 1A, 2A, and 3A apply to external threads, and 1B, 2B, and 3B to internal threads. Classes 2 and 3 apply to both external and internal threads.

Crest: The outermost tip of male thread from the fastener cylinder, or innermost tip of female thread.

Driving Recess: A recess in the fastener head designed to accept a driving tool.

External Thread: The male thread. Thread outside of the cylinder surface.

Internal Thread: Female thread. Thread on the inside surface of a cylinder or cone.

Left-Hand Thread: Thread that winds counter-clockwise from the starting end of a fastener.

Major Diameter: The largest diameter of a screw thread, on a straight thread it is the diameter of an imaginary cylinder which would pass through the crest of an external thread or the root of an internal thread.

Minor Diameter: On a straight thread it is the diameter of an imaginary cylinder bounding the root of an external thread or the crest of an internal thread.

Nominal Diameter: Basic diameter that determines the size and dimensional limits of fasteners.

Pitch: Distance from a point of a screw thread to a corresponding point on the next thread measured parallel to the axis.

Right-Hand Thread: A thread that winds clockwise from the starting end of a fastener (when viewed from the starting end).

Screw: A headed fastener which is externally threaded.

Sems®: A term applied to preassembled screw and washer assemblies. Washers are placed on screws before roll threading. Threads being of larger diameter than the washer hole thus prevent the washer from slipping off the screw.

Stud: A threaded rod - at both ends or for entire length.

Tapping Screw: A hardened thread screw made to cut or form its own mating thread in an untapped hole.

Teks®: A screw which drills its own hole and then threads in.

Thread Pitch: The distance from the crest of one thread to crest of another.

# GRADE 8 HEX FLANGE PRODUCT FOR FRAME BOLTING

## All Items Phosphate & Oil

Auveco flange bolts and locknuts form a strong and dependable fastening system that substantially cuts truck assembly, maintenance and repair costs. The flange bolts are made of IFI 111 industry standard specifications, and when used in conjunction with the flange locknuts form a 150,000 P.S.I. tensile strength fastening system equivalent to SAE J429, Grade 8 industry standard specification. Flat washers and lock washers are not needed with the flange bolts. Also our flange fastening system reduces the need for costly hole preparations such as deburring and countersinking.

## J.I.S. Small Head Cap Screws

J.I.S. B 1180 • Steel • Heat Treated • I.S.O. Class 8.8 • Zinc Plated

J.I.S. fasteners have a smaller hex dimension (across the flats) than DIN or ISO metric fasteners. They fit in those tight spots where the hex of an ISO or DIN fastener is too large. J.I.S. fasteners are OEM equipment on many GM and Japanese import car applications.

# AUVECO THIN SHEET NUTSERT® INSERTS

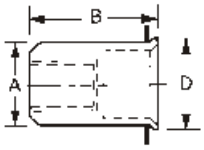
## U.S.S., S.A.E. & Metric -Steel & Aluminum

Threaded Inserts For Thin Material

The Auveco Thin Sheet Nutsert has been designed to provide a highly efficient method of securing threads from one side of the work in materials generally too thin to support threads. Its performance has been proven in plastic, aluminum, mild steel and fiberglass withstanding high loads without vibrating or loosening under extreme operating conditions. The Auveco Thin Sheet Nutsert is a tension fastener with high pull out, insuring no rotation or vibration where a cover plate is used. The system's unique blind tooling installs TSNs at consistent rates using unskilled labor.

How It Works

The Thin Sheet Nutsert, held securely by the tool, is placed into a prepared hole. Upon the tool's actuation, the threaded portion is pulled until the fastener's wall collapses radially outward, clinching it tight against the sheet. The tool is withdrawn, leaving the Thin Sheet Nutsert ready to receive a bolt or screw. This complete operation takes only a few seconds and can be performed by anyone.



1. Insert TSN into prepared hole.

2. Engage the tool

3. TSN installed With standard head configuration

Strength Tests: Torque Strength -With an attaching part over the Thin Sheet Nutsert, offering a bearing surface, the TSN will remain intact past the point of the screw or bolt breaking (head torqued off). In almost all cases the threads of the TSN will remain undistorted and serviceable -an exception to this statement is when an extremely high tensile bolt is used.

Steel: 1010 Low Carbon Steel, Type 11 Class 3 with Zinc Plate, Clear Chromate
Aluminum: Aluminum Alloy 5056, Plain Finish, Metric Class 6H, U.S. Class 2B

To Set Nutserts, Use Tool 11805 & Conversion Kits Listed On Page 92.

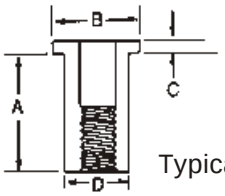
# Sec. 9 LARGE FLANGE THIN SHEET NUTSERT® INSERTS

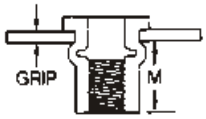
## U.S.S., S.A.E. & Metric -Steel & Aluminum

The Large Flange system provides captive threads in materials too thin to independently support threads, or where costly tapping operations are to be eliminated. The Large Flange fastener can be used as a rivet to join materials that will ultimately have a separate component attached.

Materials: Low Carbon Steel, Zinc Plated
(Metric: Zinc & Yellow Plated)
Aluminum Alloy, Plain Finish



Typical



To Set 8-32, 10-24 and 10-32 Large Flange Nutserts, use tool 11805 and conversion kits listed on page 92. 1/4"-20, 5/16"-18 and 3/8"-16 Large Flange Nutserts require a pneumatic tool for installation. They can not be set with 11805.

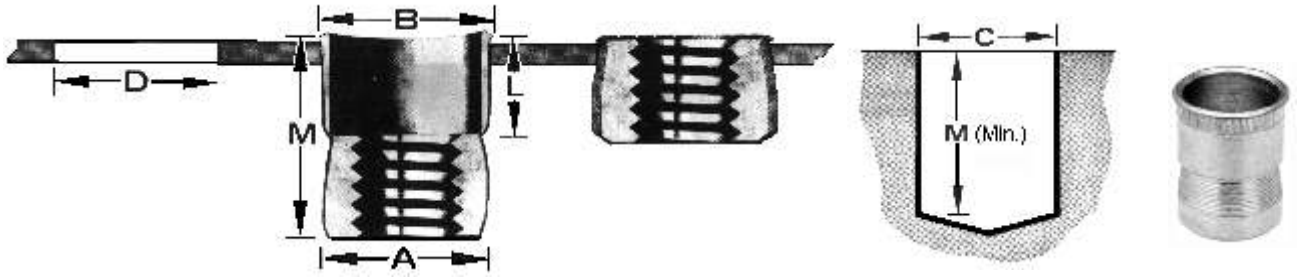
# NUTSERT® INSERTS
## U.S.S. & S.A.E. THREAD

The Auveco Nutsert® was developed to offer both the production-oriented designer and engineer a unique and versatile anchor nut-type insert for high-speed installation. This Auveco system gives the designer the option to design for blind or open applications, eliminating and simplifying his design problems.

The Auveco Nutsert® system provides a cost-saving method of installing clean, load-bearing steel threads in castings, fiberglass, fiberboard, plastics, wood or almost any ductile material more than .030" thick.

A simple hand tool installs the Nutsert®...it is ready for use in seconds… no finishing is required after installation.

Auveco Nutsert's® advanced design offers unlimited grip range in a minimum of sizes...inventory is minimized to one body dimension per thread Size; ideally suited for blind...buried… and through holes. The ingenious "taper-lock" principle locks-in the Nutsert® preventing spin or twist; installs in flat or curved surfaces and is self-tightening with repeated use. The unique design of the installation tool eliminates marring of the parent material surface.



Material: Mild Steel, Tin Plated

# HELI-COIL® THREAD REPAIR INSERTS & KITS

## For Repairing Stripped Or Damaged Threads

Heli-Coil® has the most effective and universally accepted method of thread repair. Heli-Coil® Inserts quickly and permanently restore stripped, worn or damaged threads to their original size and condition.

*Easy to use… just 1. Drill 2. Tap 3. Install Now you're back to the original size and the original size fastener can be used.*

When threads become stripped, worn or damaged for any reason, the strength and reliability are greatly reduced. When this happens on critical threaded assemblies, cars, and other types of equipment, it may become unsafe to operate.
These potentially dangerous situations are eliminated when the damaged thread is repaired with a Heli-Coil® screw thread insert. The Heli-Coil® threaded insert provides stronger, more reliable threads than the original tapped hole and at the same time eliminates the possibility of thread wear, seizing and corrosion.

# WASHERS

## Nord Lock Vibration Proof Lock Washers

For Use With Grade 5, Grade 8 & ASTM 574 High Grade Bolts
Zinc Flake Coated

These washers have cams or wedges on one side, with a lead angle greater than a thread angle, and radial teeth or ribs on the other side. The washers are installed cam face to cam face. When tightening the fastener to preload, the teeth penetrate and seat against the joint material and the nut and/or fastener head. When subjected to vibration the interacting cams create a wedge action which prevents the fastener from vibrating loose.

Material: Carbon Steel
Hardness: Through Hardened: 465HVl

## Sealed Crimp & Solder Butt Connectors

### The Ultimate Electrical Connection!

Sealed Crimp & Solder Butt Connectors are crimped for mechanical reliability, soldered for superior strength and conductivity, and sealed with heat shrink tubing for maximum durability.

The Components:

THE CRIMP CONNECTOR

*There are crimp indicators which show where the installation tool should be positioned
*Wire-stop in the connector prevents over-insertion of the wire
*Window in the connector allows for visual inspection & solder to flow into

THE SOLDER

*Flux coating to clean metal surfaces
*Pre-measured solder to provide the right amount of solder to ensure a solid termination
*Low-temperature solder alloy for ease of installation

THE HEAT SHRINK TUBING

*Adhesive lined polyolefin to seal the connection
*Color coded with wire gauge imprint for easy size identification
*Translucent tubing to allow for visual inspection

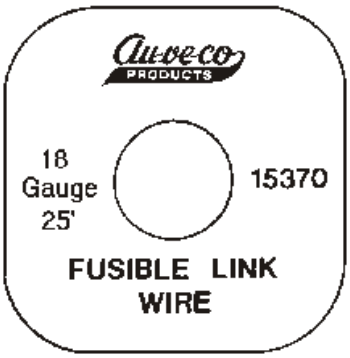
# SPOOLED FUSIBLE LINK WIRE

The lower the gauge number, the thicker the wire (i.e. 10 ga. is thicker than 16 ga.)



A fusible link is a special section of low tension cable installed by an OEM and designed to open a circuit when subjected to extreme current overload. Its purpose is to minimize wiring system damage when such an overload accidentally occurs in those circuits protected by the fusible link. A short circuit causes the fusible link to act as an element in a "slow-blow" fuse. A fusible link is not intended to be used in place of a fuse but only where a fuse cannot be economically employed. Our fusible line wire meets the requirements of SE J-156 and the insulation has the characteristics as listed for EAE, SE J-1128 Type SXL. The vehicle manufacturer should be consulted about questions on fusible link length and size. General practice has been for a fusible link to be 4 gauges smaller than the circuit wire. Example: if the circuit wire is 12 gauge, use a 16 gauge fusible link. Final determination should be based on O.E.M. application.
Note: Extreme care should be taken to always replace a fusible link with the same gauge and length as installed by the manufacturer.

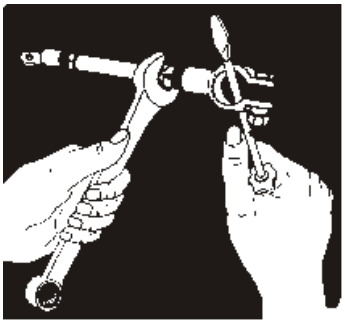
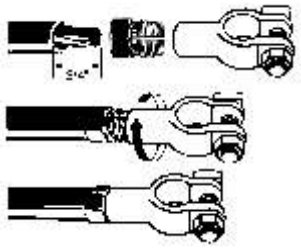
# COMPRESSION BATTERY CABLE TERMINALS

All clamps and lugs are made of cast copper • All clamps, lugs and fasteners are tin plated

Assemble with common hand tools.





Three Easy Steps
1. Strip 3/4" of insulation from the end of the cable. Insert bared wire into the compression nut.
2. Thread terminal on compression nut.
3. Grip compression nut with wrench and turn the terminal until the compression nut seats. With larger gauges you may want to hold the terminal in a vise.

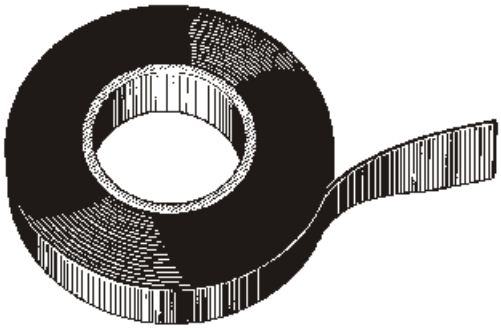
## 3M Vinyl Electrical Tape

Made In U.S.A.



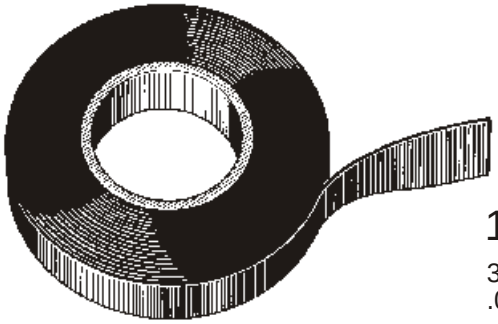
.007" Thick x 3/4" Wide x 60 Ft. Long

16527 Unit Package: 5 Rolls
16578 Unit Package: 15 Rolls

General purpose vinyl insulating tape with excellent resistance to abrasion, moisture, alkalies, acid, copper corrosion and varying weather conditions. Can be used as a primary electrical insulation for all wire and cable splices rated up to 600 volts.

## Linerless Self-Bonding Rubber Tape

Replace heat shrink tubing with a safe, tight, long-lasting seal that withstands temperature extremes from -50° to 300°F. No heat guns or open flames needed. No paper liner to mess with.



14389

3/4" x 15 Ft.
.030" Thick

UNIT PACKAGE: 1 Roll

Self-bonding rubber tape can be used to replace heat shrink tubing in most automotive applications. It is stretched when applied and retains its elasticity to ensure a tight seal at all points. There isn't a possibility of a leak due to unevenly applied heat as can happen with shrink tubing.

The tape is unaffected by salt spray and common automotive fluids. As long as it is stretched when it is applied, it will not unravel after application due to its self-bonding characteristics.

## Routing Clips

A quick, economical method of fastening wires, tubes, hoses or rods from 1/4" to 1" diameter to metal, plastic or any other surface ranging from 1/32" to 1/8" thickness. Clips are molded of durable black nylon plastic. They snap into 1/4" diameter holes and are held firmly in place by flexible “snubber tips” which compensate for variation in wall thickness.

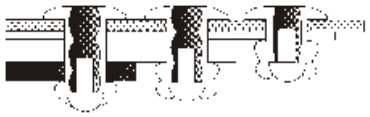
# POP® MULTI-GRIP BLIND RIVETS

## Functions In A Wide Range Of Material Thicknesses



The Multi-Grip rivet will serve in applications where solid and soft materials and thicknesses normally require several rivet sizes. Oversize, irregular or misaligned holes are automatically compensated for by the self-adjusting hole-filling capability. The mandrel head is retained in the rivet body, forming a tight, weather resistant seal.

# AVEX® BLIND RIVETS

What Makes Avex® Different...And Better?
The Avex® rivet adds important… and exclusive...features to those offered by ordinary blind rivets. The unique advantages designed into the Avex® rivet allow for its use:

In wide-tolerance holes. Since the rivet can expand up to its own head diameter, accurate hole sizing or alignment is not necessary.

To pull sheets together. The extraordinary rivet tail expansion automatically effects superior clamp-up action on the parts being assembled.

Over a vast range of thicknesses. The “dubble-bubble” expansion feature offers the capability to fasten securely in both thick and thin grip ranges with a single length rivet.

While providing a sealed stem. The rivet material flows both behind and in front of the mandrel insuring a positively retained and sealed stem.

## Monobolt Nosepiece

13825 For 1/4" Monobolt

UNIT PACKAGE: 1

The System
*Blind Installation* -The single side installation feature of the Auveco Monobolt System allows one operator to produce high quality structural joints in seconds. Use of the Monobolt power tool does not require special skill or training, because the tool completely controls the installation cycle.

*Multi-Grip* One size Monobolt fastener will function effectively in a wide range of material thicknesses (Example: .080" to .375"). This versatility decreases the potential for production errors and reduces fastener inventory requirements.

*Uniform Clamping Action*
Monobolt fasteners are engineered to draw materials together by developing positive clamping action.

*And Its Advantages*
Structural Fastening An installed Monobolt fastener yields high shear and tensile values. Conventional fasteners can be replaced by Monobolt without compromising structural requirements.

*Positive Stem Retention:* At the completion of the installation cycle, the stem is mechanically locked into the Monobolt shell, creating a vibration-proof joint of assured structural quality.

*Flush Break Stem:* Within the specific grip range for each size, Monobolt fastener, the stem is designed to break flush with the low profile head. Secondary finishing operations, such as grinding or milling, are not necessary to achieve good product appearance.

*Complete Hole Fill:* During installation, the Monobolt shell expands into 360° contact with the walls of the parent material. This feature, in conjunction with positive stem retention, produces weather resistant joints.

*Quiet, Safe Installation:* The Monobolt System, operating at 85db ("A" Weighted), complies with OSHA regulation governing plant noise levels and operator safety

How It Works

1. The Monobolt fastener is loaded into the nose of the placing tool and inserted in a prepared hole. As the tool is actuated, the pulling jaws grip the Monobolt stem.

2. An axial pull draws the stem through the shell, expanding it radially. During this phase, the hole is completely filled and work pieces are drawn together.

3. When the stem reaches a pre-determined position within the Monobolt shell, it separates flush with the head profile regardless of work piece thickness. Simultaneously, the stem section remaining in the shell is mechanically locked in place by the Monobolt tool.

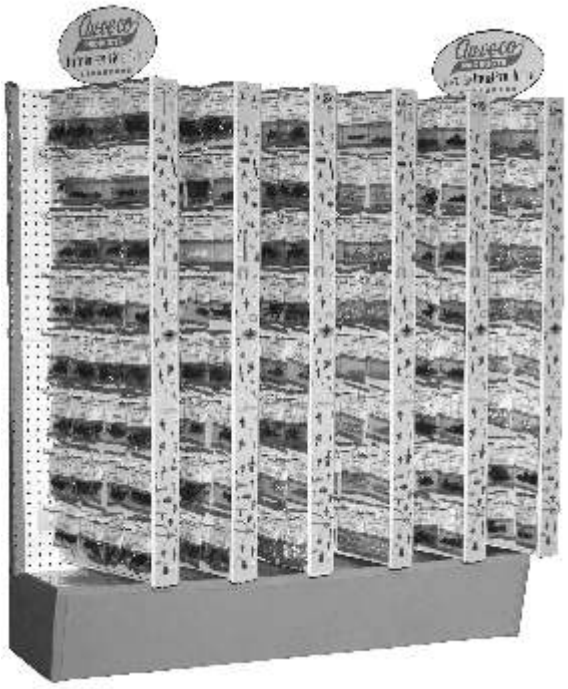
# *"AuvecoPak"* AP384 RETAIL MERCHANDISER

NOTE: AuvecoPak part numbers are the same as standard Auveco part numbers with an "AP" prefix. Thus AP11146 is the AuvecoPak version of 11146.



AUVECOPAK

The AuvecoPak merchandisers (AP384S and AP384L) provide 384 of the fastest moving, most popular automotive body hardware and specialty fasteners in a one-price package all on one 6-panel merchandiser. Each panel contains 32 part numbers per side. The AP384S (Starter Merchandiser) consists of one package each of the 384 part numbers. The AP384L (Large Merchandiser) includes two packages each of the 192 most popular items and one package each of the other 192 part numbers for a total of 576 packages.

With just a glance, two attractive header signs identify the AP384 as an Auveco merchandiser, the name synonymous with automotive body hardware and specialty fasteners.

Initial set-up is as easy as 1-2-3 since the panels come "pre-dressed" with the AuvecoPaks already in place. Simply position the top and bottom brackets on a gondola or pegboard wall. Insert the panels into the brackets and you're ready for business.

An individual panel measures 6-1/2" (wide) x 17-1/2" (front to back) x 44-1/2" (high) – maximum coverage in minimum space. AuvecoPak 6-panel merchandisers (AP384S and AP384L) fit on a gondola with 48" x 48" of pegboard or on any pegboard wall.

*A gondola is not included with the AP384S or the AP384L. Auveco customer service reps can recommend a source for gondolas.*

The attractive green AuvecoPak packages feature eye-appealing, contemporary graphics with all the necessary application and descriptive information in trilingual verbiage (English, Spanish and French-Canadian) as well as locator codes that identify their location on the panels. The AuvecoPak part numbers are the same as the standard Auveco part numbers with an "AP" prefix. Thus AP11146 is the AuvecoPak version of 11146.

We've made re-ordering a snap by putting the AuvecoPak part number and a UPC-A bar code on the panel back-up boards beneath each hook. Then restocking the merchandiser is also quick and easy since the AuvecoPak packages contain locator codes that identify their specific location on the panels.

AP384S (Starter Merchandiser): one package each of 384 part numbers

AP384L (Large Merchandiser): two packages each of the 192 most popular items and one package each of the other 192 part numbers for a total of 576 packages.

# GROMMETING & TIRE VALVES

## Flexible Serrated Polyethylene Grommeting
(Natural Color)

Grommeting is primarily used to protect wires and cables from sharp panel edges. Wires that are routed through knock-outs or over sharp edges need to be prevented from chafing against those edges. Grommeting can also be used to protect the edges of glass, sheet metal, wood panels, or other sheet-form materials. Depending on the panel thickness of the application, grommeting may grip tightly by itself—if not, a touch of epoxy will keep it in place.

## PUT AN END TO CONTINUAL TAILGATE CABLE REPLACEMENT!

## 20872

2004 - 1999 full size GM Pick-Up Trucks are originally equipped with galvanized, braided steel tailgate cables that may corrode, weaken and eventually break. Auveco's new 20872 stainless steel tailgate support straps are the ideal replacement. Our support strap is stronger and more durable than cable. It mounts the same as the original cable, uses the same hardware and can be installed in 15 minutes. The 20872 can be used for both sides of the tailgate.

# Door Hinge Pin & Bushing Repair Kits

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time?

With our Door Hinge Pin & Bushing Repair Kits, fixing sagging doors caused by worn hinges due to pin failure is quick. It's easy. It works. And you don't have to repaint the welded heat flash area.

Each kit is designed to repair one hinge and contains all the pins, bushings and related hardware to do the job.

Here's how it works:

1. Remove the door from the truck body
2. Remove the original equipment pin and bushings
3. Install the bushings into the hinge holes
4. Install the longer pin into the top hinge hole
5. Thread on the lock nut
6. Install the shorter pin into the bottom hinge hole
7. Place the washer and a nut on the shorter pin
8. Tighten the nut to pull the pin into place.
9. Slowly tighten both upper and lower lock nuts
10. Reattach the door to the truck body

ISO9001: 2000 CERTIFIED

Detailed instructions are included with the kit.

# Dodge Truck
# Door Hinge Bolt & Bushing Repair Kit

*For 2003 – 1994 Dodge Ram 1500, 2500 & 3500 Pick-Up Trucks*

Why bother with the hassle of cutting and grinding off a worn door hinge and welding on a new one when you can repair the bad hinge in a fraction of the time?

With our Door Hinge Bolt & Bushing Repair Kit, fixing sagging doors caused by worn hinges due to pin or bushing failure is quick. It's easy. It works. And you don't have to paint the welded heat flash area.

Each kit is designed to repair one hinge and contains one zinc and yellow dichromate plated grade 8 bolt, two self-lubricating brass alloy bushings, one zinc plated spin lock nut and one zinc plated internal lock washer.

Here's how easy it is:

1. Remove the door from the truck body.
2. Grind or cut off the end of the pin at the peaned end.
3. Remove the old pin and bushings.
4. Install the bushings into the hinge holes.
5. Place the washer on the bolt and install the bolt into the bushings.
6. Thread the nut onto the bolt and tighten.
7. Reattach the door to the truck body.

# HOSE CLAMPS

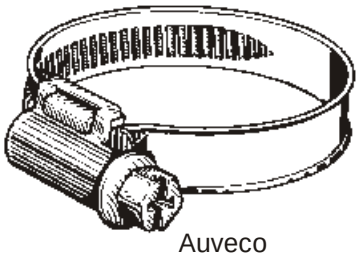
## Norma Torro (European Style) Hose Clamps

DIN 3017 • Stainless Steel Band & Housing • Zinc & Yellow Steel Screw



Unique off-set non-welded design of the housing provides resistance to over-tightening damage to the hose. The short housing saddle gives a smooth underside ensuring high sealing efficiency. These clamps are original equipment on both domestic and import vehicles. They are particularly suited for fuel, vacuum, water, emission and heater hoses and can be used with silicone hoses.

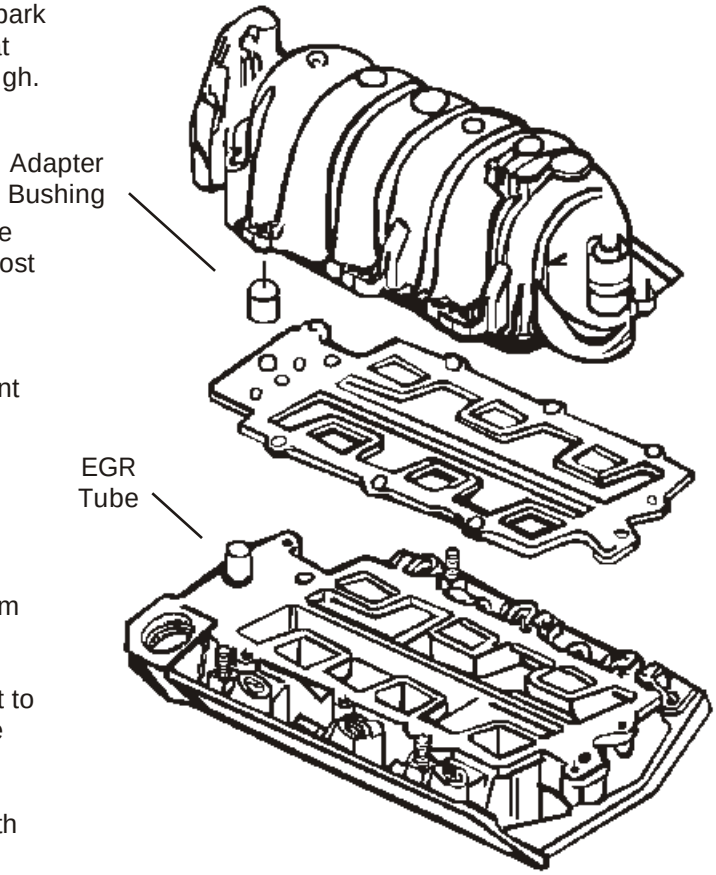
# ENGINE MANIFOLD REPAIR KIT

## STOP EXCESSIVE COOLANT CONSUMPTION OR LEAKAGE!!!!

20574
Engine Manifold
Repair Kit

UNIT PACKAGE: 1 Kit

2003 - 1995 GM vehicles with 3.8 L series 2 engines (VIN K - RPO L36) have been experiencing excessive coolant consumption or coolant leakage near or under the throttle body and intake manifold. This is caused when the EGR tube on the lower manifold degrades the composite material of the upper intake plenum around the passage area between the two part manifold. Once the composite material is degraded, it becomes porous and allows the coolant areas on either side of the EGR passage to leak coolant either internally or externally. If it leaks internally into the intake manifold and then the cylinders, it can result in "hydro-lock" of the engine. A simple coolant leak has resulted in a major problem that as best requires changing the spark plugs and oil in order to start the engine. That doesn't correct the cause of the problem though.



Until now, the solution has been to replace the upper plenum and lower manifold at a retail cost of $1200 - $1400 for parts and labor. Yet that alone does not correct the root cause of the problem. Our 20574 repair kit offers an inexpensive but highly effective and permanent solution. Here are the steps involved:

1. Remove the upper intake manifold.
2. Remove the EGR tube from the bottom plenum.
3. Install our new EGR port tube.
4. Use epoxy supplied with our repair kit to install our new adapter bushing in the upper plenum.
5. Reinstall the upper intake manifold. (Detailed instructions are included with the kit)

As an added benefit, the smaller diameter of our EGR port tube creates an air space between the repaired (with adapter bushing) upper plenum and the new EGR port tube. This air space insulates the composite material of the plenum from further damage.

UNIT PACKAGE: 1

Replacement Extractor Tools

| Auveco Part No. | Drill Size |
|---|---|
| 20537 | 1/4" (6mm) |
| 20538 | 5/16" (8mm) |

The Drill-Out Broken Bolt Extractor is excellent for removing broken bolts and studs without damaging the threads in the hole. The drill body is manufactured using the finest quality hi-speed steel. The collet is produced from hot die steel, using the finest steel of its type. All Drill-Out Broken Bolt Extractors are made with a precision ground 118° left hand cutting self-centering point, and are heat treated for toughness.

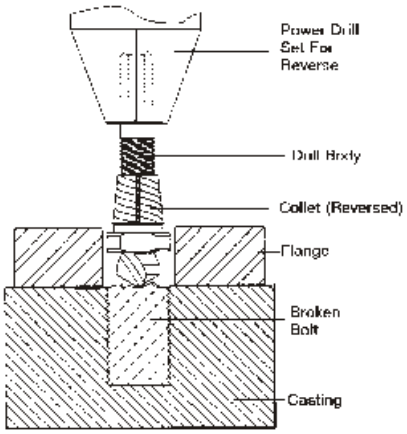

FIG. 1

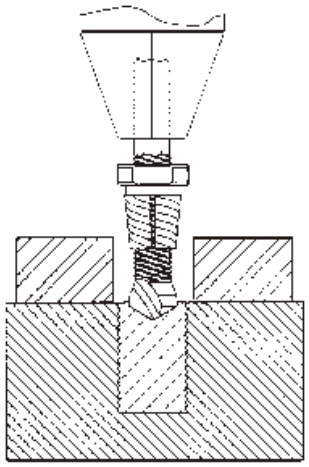

FIG. 2

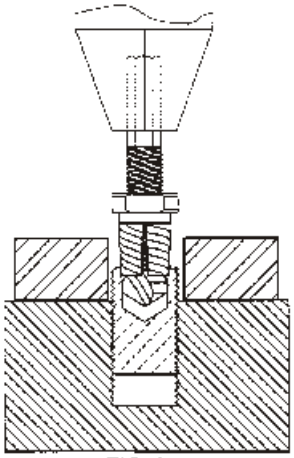

FIG. 3

## Fast & Easy To Use.

Always Use Protective Eye Wear When Drilling.

1. Place the Drill-Out tool into an electric drill and set for reverse operation. Move the collet up to the chuck. Note: when the bolt is broken below a flange attached to a casting, reverse the collet as in (Fig. 1.)

2. Making sure the drill is set in reverse, place the tip of the Drill-Out on the center of the broken bolt and begin drilling. Do not allow the collet to move down towards the tip while drilling. If so, thread the collet back towards the chuck. Drill just deep enough to start a hole (approximately 1/16").

3. Make sure the hole is started on center of the bolt. If you reversed the collet in step 1, change it back at this time. Continue drilling. Stop just before you reach the front of the collet. Do not let the collet touch the end of the bolt. (Fig.2)

4. Remove the Drill-Out tool from the broken bolt. Move the collet down towards the tip so that 2 threads are showing. Bring drill up to speed and plunge it into the hole. The collet automatically engages and extracts the broken bolt. (Fig.3)

# O.E.M. INTERCHANGE BY MANUFACTURER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finished, length, washer O.D.: however, the Auveco part is designed to service the same application.

This interchange is not listed in strict numerical order (from the lowest number to the highest number.) Rather it is arranged in numerically ascending order from the left regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.

# O.E.M. INTERCHANGE BY NUMERICAL ORDER

The O.E.M. numbers listed in this interchange are cross referenced to the closest equivalent Auveco part. In some instances, the parts are not identically the same. There may be slight differences in the finished, length, washer O.D.: however, the Auveco part is designed to service the same application.

This interchange is not listed in strict numerical order (from the lowest number to the highest number.) Rather it is arranged in numerically ascending order from the left regardless of the number of digits in each O.E.M. number. Thus every number that begins with a 1 is listed before any number that begins with a 2. You should key on the first four digits to locate the number. For example, 1121865 is located before 11229 and after 11189734. OEM numbers that begin with a letter precede OEM numbers that begin with a numeral.

# FasTrack™ Cost Recovery System

Auveco's FasTrack, is a user-friendly software application, developed to assist collision repair shops in recovering the cost of trim clips, moulding clips and other fasteners used in automotive body repair.

Historically, the cost of fasteners used in collision repair has been an expense item that was not recovered by the body repair shop. Insurance companies usually refused to pay claims for these items without them being itemized into an invoice referencing the vehicle's repair order.

Many collision shop technicians were unwilling to take valuable time away from an actual repair to prepare these detailed invoices. As a result these items were not invoiced and ultimately cost the collision repair shop hundreds of dollars each month in lost revenue.

With the help of FasTrack, these profit-draining parts now become a source of additional income for the collision repair shop.

The major benefit of FasTrack is its ability to quickly and easily create the professional, accurate and detailed invoices required by the insurance companies for reimbursement.

FasTrack works with a supplied database containing the complete line of the Auveco collision repair fasteners. The FasTrack database includes detailed information on every item, including OEM part numbers and current OEM dealer list pricing. FasTrack is the only software application of this type to use the actual dealer OEM list pricing for the invoicing process. This leads to unquestioned acceptance and payment by the insurance companies for the charges. The software also contains features that allow this data to be updated thru the year as Auveco adds new items or as the pricing changes.

The FasTrack application also offers extensive inventory control capabilities and an option to use with a bar-code scanning unit. AUVECO'S FASTRACK IS OFFERED ONLY THROUGH AUTHORIZED AUTO VEHICLE PARTS COMPANY DISTRIBUTORS. For a Distributor in your area, call Customer Service at 1-800-354-9816 ext. 1.

THERE ARE TWO VERSIONS OF FASTRACK, FASTRACK PRO AND FASTRACK WEB, DESIGNED TO ENABLE YOU TO SCALE THE SOFTWARE APPLICATION TO THE REQUIREMENTS OF THE INDIVIDUAL BODY SHOP.

FasTrack Pro (v1.1) is the very latest release of Auveco's original and very successful Body Shop Cost Recovery Software. It is installed locally via CD on your customer's Windows-based PC. It continues to be feature-rich with Cost Recovery and Inventory Control components. FasTrack Pro has been updated to include more of the necessary parts, clips and fasteners needed by the collision repair shops. It includes updated OEM pricing, a new ability to update itself through the year, and improved screen and report design to make using FasTrack easier for everyone. It is the version of choice for those shops needing the full-function of FasTrack and for those shops utilizing the Bar Code Scanning and inventory control features.

FasTrack Web is our latest Internet-based innovation to make the cost recovery process for clips and fasteners, simple and easy-to-use. It is ideal for those shops not needing all the features of FasTrack Pro. This application runs entirely through your Internet Browser. The benefits are obvious. There is no local shop install process needed. All that is required is a good connection to the Internet, a browser such as Microsoft's Internet Explorer and an annual login obtained from Auveco. There are no annual updates to worry about, the data resides on our fast Internet server and is always up to date with the latest parts and information. The easy-to-use FasTrack Web system will allow you to quickly create professional invoice documents to enable recovery of the cost of body repair fasteners from the Insurance companies. Because FasTrack Web is built around the same OEM Dealer List Price data that FasTrack Pro uses, you can count on acceptance and payment from the Insurance Company. FasTrack Web is also a more economical solution for the small shops as it is priced much lower than FasTrack Pro.

FT-SCAN2 is our new handheld scanning unit and it is truly a Mobile Computer. The system is new to the industry and is produced by Socket Communications. The Socket SoMo 650 is a cost effective, full functioned Windows Mobile 5.0 based computer that is equipped with a scanning head for use with FasTrack Pro.
