DOOR ALIGNMENT TOOL

85-2106

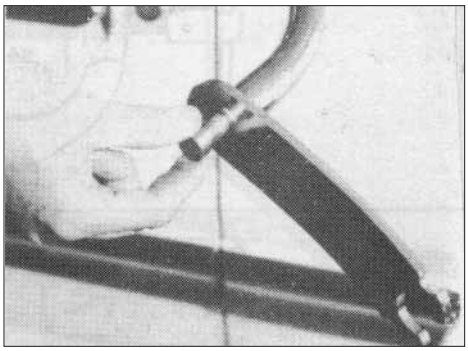

UNIT PACKAGE 1

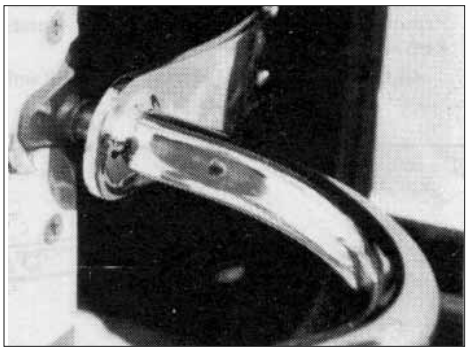

Patent No. 4,399,683

Strong, Tubular Steel Construction. Chrome Plated

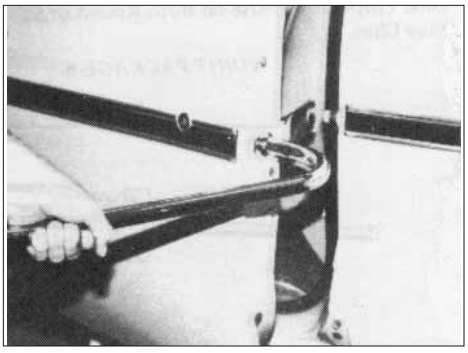

Quick and Easy-To-Use

1} Select shoulder screw apprpriate for size of lock mechanism and thread into attachment point.

2} Fit shoulder screw into lock mechanism on door.

3} Close car door until recess fits over lock pin on door frame. Then apply pressure to handle either up or down, for desired door alignment.

Accurate Door Alignments in Seconds!

Three shoulder screws ensure proper alignment for domestic and import cars and trucks. Shoulder screws are stored in end cap when not in use.

No More Guess Work or Door Frame Damage!

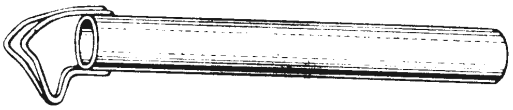

Positive engagement of shoulder screw in lock mechanism & tool recess on striker prevents slippage or lock damage.

Saves Time!

Align in either direction, no need to remove tool and reposition.

HEAVY DUTY HAND RIVETER

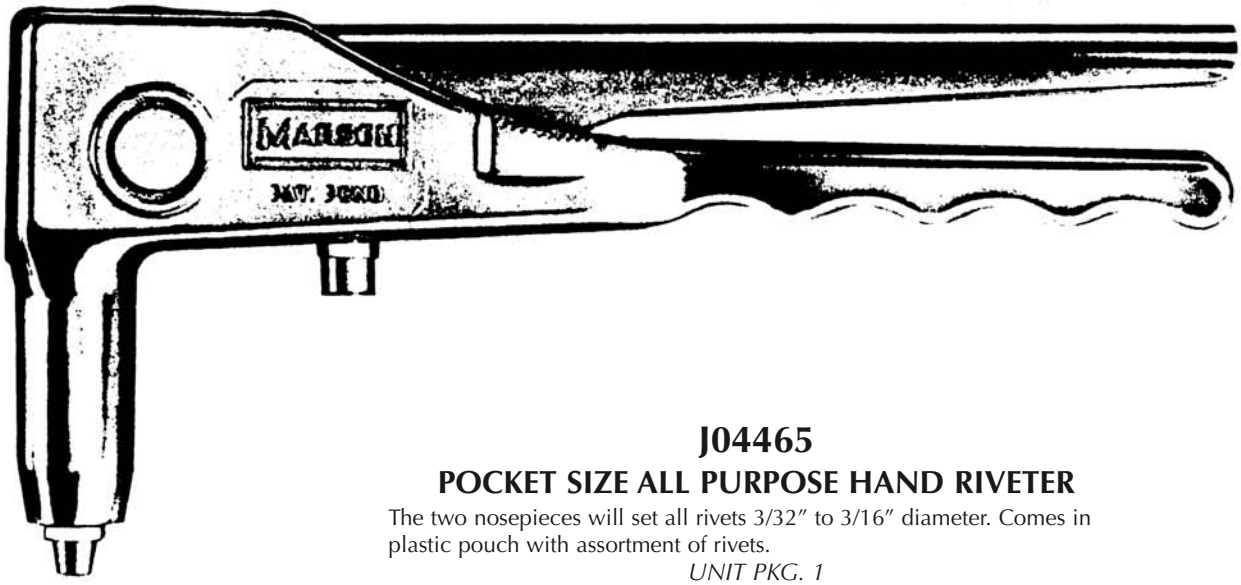

Takes the hard work out of setting large blind rivets, up to and including 1/4″ dia. all steel. Super-powered by reduction gears and plier-like handles that provide super-leverage. Eliminates denting or damage to thin or delicate materials (no pressure or shock against work surface), reduces operator fatigue, and increases assembly speed. Outlasts, outperforms, and costs less than any other heavy duty hand tool. Weighs just 3-1/2 lbs.

NOSEPIECE

The above rivets require a special 1/4″ nosepiece as the rivets cannot be installed with the standard nosepiece. In addition, due to the fact that these are structual rivets they require 20% more force to set than the standard 1/4″ rivets.

UNIT PACKAGE 1

J02036 CRIMPING TOOL

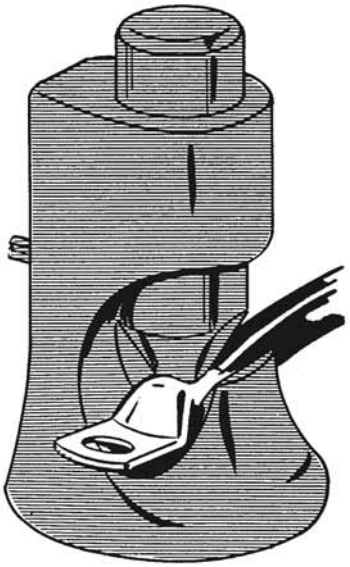

UNIT PKG. 1

Crimps all non-insulated terminalsfrom #16 through 4/0 wire gauges. Adjustable scale on side of toolprevents over crimping or under crimping. Flat base steadies tool while one sharp blow of hammer fuses terminal to cable.

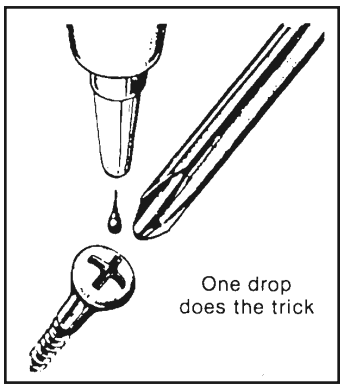

These terminals when used with the #2036 crimping tool literally fuse the terminal to the cable without the need for flux or heating iron.

Cables of any length can be made from these terminals and a spool of wire, eliminating the need for stocking various lengths of cables.

The #2036 crimping tool and a hammer permits repairs or the replacement of cables in the field. Useful for farm equipment, trucks, lifts, boats or wherever a cable is used.

Use with: • Screwdrivers • Hex Keys • Pliers • Channel Locks • Wrenches

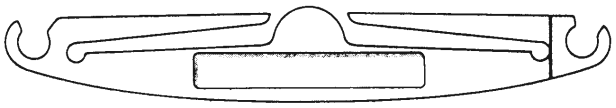

- Eliminates the need for specialty drivers
- Reduces the need to drill out damaged screws
- Prevents slippage of driver (protecting surrounding surfaces)
- Reduces fatigue
- Wipes clean, no staining

FIX-A-THRED

THE FIX-A-THRED SYSTEM

- stronger and more efficient threads with greater holding power in most applications
- the simple and cost-effective way to repair stripped or damaged threads
- suitable for new applications requiring strong threads
- ideal for alloys and other light materials
- simplifies change over from imperial to metric, and vice versa
- inserts are interchangeable with other brands of helically wound inserts

The Fix-a-Thred system consists of Fix-a-Thred stainless steel helically wound precision inserts, high-quality hand taps and installation tools. Inserts are available in both free-running or locking types in a wide range of imperial, metric and spark plug sizes.

WHERE TO USE FIX-A-THRED

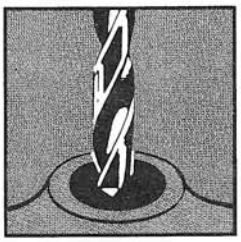

Repair stripped, damaged or worn threads. Prevents future failure. **Strengthening.** High strength threads in light alloys etc. prevents failure. **Changeover.** Inch to metric or vice versa. No need to increase bolt size or bolt hole for mating parts. **Bolt and stud fracture prevention.** Fix-a-thred shares the load and virtually eliminates bolt or stud failure. **Wear** is eliminated. Fix-a-thred is hard, strong, stainless steel. Ideal when bolts are frequently removed and replaced. **Cost and weight savings.** Designed and manufactured in lighter and more economical materials to retain same assembly strength. easier to use. Easier than drilling and tappinq for larger bolts.

HOW FIX-A-THRED WORKS

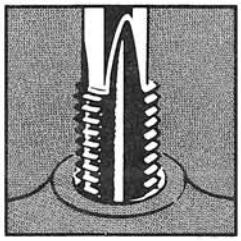

Fix-a-Thred inserts are made from high quality stainless steel wire, with a diamond shaped cross section, wound to the shape of a spring thread. The insert, which is larger in diameter than the tapped hole, is compressed during installation then allowed to spring back, permanently anchoring into place. Because it is bigger, the Fix-a-Thred insert has greater area to hold in and is stronger than original threads. The insert's compensatory action shares the load over the entire bolt and hole, thus reducing stud fracture, and increasing holding or pull out strength.

Drill

Drill to clear out the damaged thread (if necessary).

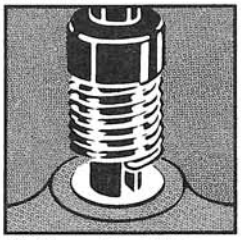

Tap

Thread insert tap supplied. Tap thread should match up with bolt.

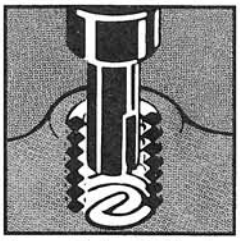

Install

Wind insert in with light downward pressure until quarter to half turn below surface, driving tang towards bottom of the hole.

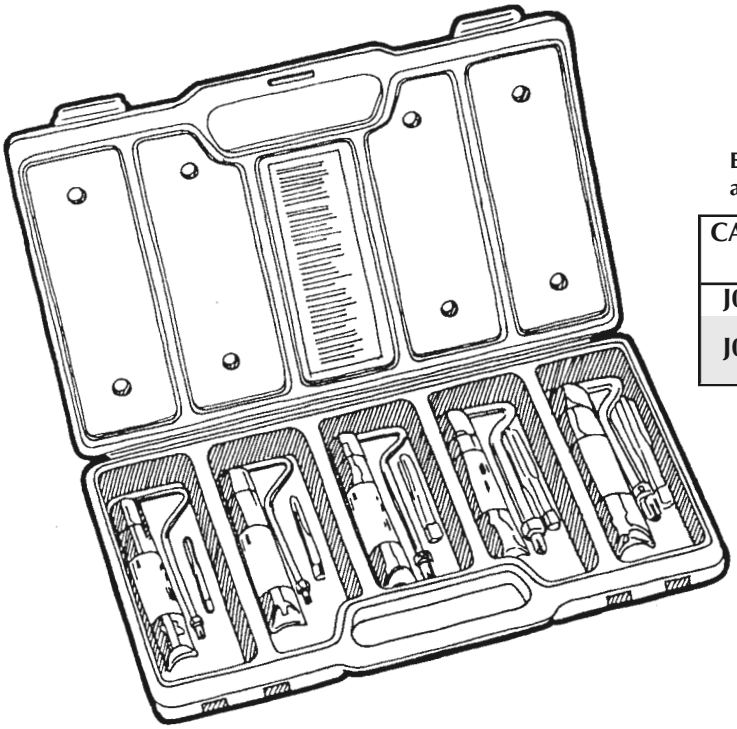

Tang Removal

Remove tool and sit back on top of tang. Tap down sharply. Do not try to twist tang off. For sparkplug and large fine threads, use long nose pliers and pull tang out.

FIX-A-THRED

THE SPLIT DIE FOR THREAD REPAIR.

It's The Spring That Makes It Special!

Imagine a threading die, cut in half, its sides grooved to hold a spring and you have the revolutionary new thread repairing split die.
Simply pull the two halves apart and place behind the damaged area. The spring keeps the die in place. Turn counter clockwise and you've repaired the damage. The Simple Time Saver cuts downtime by 80% or more.

Made in the U.S.A. of tough carbon alloy tool steel, these dies will provide years of reliable service. Sold in sets and singles, in sizes from 1/4" to 1", threaded for national coarse and fine. All dies include a limited warranty.

THREAD REPAIR DIE

"The Simple Time Saver"

1. Always use safety goggles.
2. Do not use air wrench.
3. "Start This Side" imprinted on die should face you.
4. Do not overstretch spring.
5. After die is positioned, rotate by hand assuring both halves are aligned on same thread.
6. Use small amount of thread oil for best results.
7. Use socket.
8. All of die should be in socket.
9. Keep die at right angle to shaft as you turn counter clockwise.

Note: You may want to mark both halves in case you lose spring. This will allow proper reassembly.

POWER WINDOW MOTOR GEARS

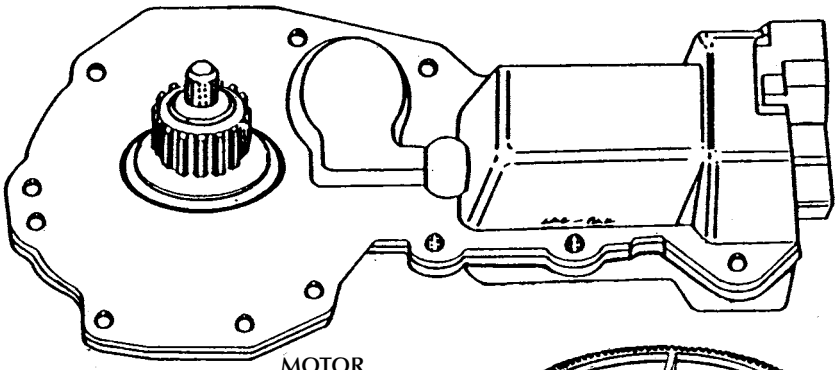

SUGGESTED METHOD TO REPAIR G.M. STEEL POWER WINDOW MOTOR

Use cold chisel to remove rivets and perforated metal holding both halves of motor together. Remove retaining push nut from shaft motor. Disassemble motor being extremely careful to keep electrical parts intact.

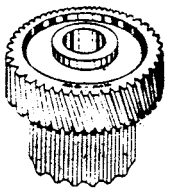

Remove gear and replace with new gear. (If this gear is not the problem, this repair kit will not do the job.)

Replace electrical parts, replace steel cover and using the supplied bolts and lock nuts. Note the two sizes of bolts & nuts. You may have to run a drill bit through the holes left by the sheared metal retainer.

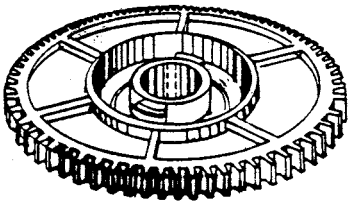

Replace new push nut onto shaft and seat for maximum retention.

MALE DISCONNECTS - HEAT SEAL

Heat shrinkable tubing needs only a heat gun to shrink the tubing. It has a shrink ratio of 2 to 1 and has many applications, such as: Insulation of electrical terminals, splicing of wiring, containing wiring in harnesses, insulation of tool handles, and waterproofing. The tubing has good fuel and oil resistance qualities.

ELEKTRALINK

THE SEALED SOLDER CONNECTION ELIMINATES CRIMPING

Elektralink (TM) terminals provide a fast, easy, reliable and moisture resistant way to complete sealed in-line wire splices.
In a one step operation, each connection solders, insulates, encapsulates and relieves wire strain for wires from 20 AWG to 10 AWG. When heated with a heating tool the sleeve shrinks and the solder melts and flows resulting in a perfectly sealed solder connection.

PUSH NUT (P-NUT)

P-Nuts make solid wire connections faster than ever. Use in commercial or residential buildings electrical equipment, wherever.
P-Nuts are simple, safe and easy to check.

Temperature range
-40° C to +105° C
(-40° F to +221° F)
UL-approved up to
150° C (302° F)
Rated voltage: 300 V.

Housing
Tough, durable, flame resistant Polyamide 6.6.

Clamping Frame
Made of brass or *tin-plated copper alloy.
Highly conductive and corrosion resistant.

Clamping Springs
Vibration proof.
Made of high tensile stainless steel to give constant contact. pressure even under high heat and or chemical exposure.

Test Points
Test points front and back permit easy testing continuity or voltage.

Compression Battery Terminals Assemble With Common Hand Tools

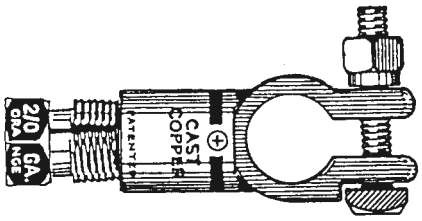

Three Easy Steps

1. Strip 7/8″ of insulation from the end of the cable. Insert bared wire into the compression nut.
2. Thread terminal on compression nut.
3. Grip compression nut with wrench and turn the terminal until the compression nut seats. With larger gauges, you may want to hold the terminal in a vise.

"EZ" TWIST LOCKS

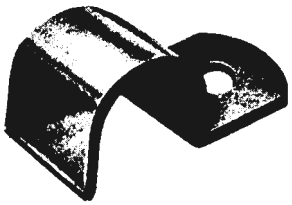

"EZ" Twist Lock Building Ties offer a fast, economical way to securely position and hold wire, cable or tubing. A single twist of the finger locks the bundle together. Another twist will open the lock to add or remove wire to the bundle. The reusable "EZ" Twist Lock is molded of tough, resilient Nylon. Natural Nylon

SCREW THREAD & HEAD TYPES

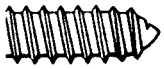

STANDARD TAPPING SCREW THREADS

TYPE A (ASA-A): A thread forming screw for use in thin metal .015 to .050 thick. Used with drilled, punched or nested holes in sheet metal, resin impregnated plywood, asbestos combinations, among others.

TYPE B (ASA-6): A thread forming screw for use in heavier metal .050 to .200 thick.' Larger root diameter with finer thread pitch for light and heavy sheet metal non ferrous castings, plastics, impregnated plywoods, asbestos combinations, and other materials.

TYPE BA (ASA-BA): A thread forming screw combining locating type point of Type A with thread size and pitch of type B. Normal limitations of Type B apply.

TYPE BP (ASA-BP): Thread forming screw. Same as type B but has a cone point for use where holes are slightly misaligned. Spaced thread.

TYPE C (ASA-C): A thread forming screw with either coarse or fine pitch machine screw thread and blunt tapered point. Eliminates chips and permits replacement with standard screw in the field. Higher driving torque required. Usable in heavy sheet metal and die castings.

TYPE 17 (ASA-17): A thread cutting screw for wood with a coarse tapping screw thread and a special long sharp point fluted to capture chips.

TYPE I (ASA-D): A thread cutting screw with single flute for general use. Produces a fine standard machine screw thread for field replacement.

TYPE F (ASA-F): A thread cutting strew with machine screw thread with blunt tapered point, having multi-cutting edges and chip cavities. For heavy gauge sheet metal, aluminum, zinc, and lead die castings, cast iron, brass and plastic.

TYPE G (ASA-G): Thread cutting, Blunt Die Point with a single through slot to form two cutting edges. Machine screw threads. For same general use as type C but where less driving torque is required. For low strength metals and plastics.

TYPE 23 (ASA-T): A thread cutting screw in the fine thread series offering maximum thread cutting area and excellent chip clearing, with minimum tightening torques.

TYPE FZ (ASA-OF): A thread cutting screw with a tapping screw thread with blunt tapered point and multi-cutting edges and chip cavities. For plastics, die castings, metal clad and resin impregnated plywoods, and asbestos.

TYPE N (ASA-BG): Thread cutting. Spaced thread, blunt Die Point. Single slot has 2 cutting edges, Useful for brittle or friable material where threads too close together may cause material to crumble. Good in plastics and soft materials.

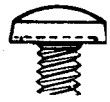

TYPE 25 (ASA-BT): A thread cutting screw similar to Type 23 point except with coarse Type B thread. For plastics and other soft materials with large chip clearing and cutting edges.

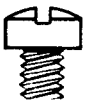

TYPE U (ASA-U): A thread forming screw with high Helix thread for driving or hammering into sheet metal, castings, fiber or plastics for permanent, quick assemblies.

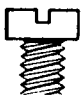

STANDARD HEAD STYLES OF SCREWS

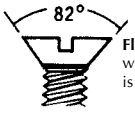

Binding-undercut unless otherwise specified-not. recommended for phillips recess.

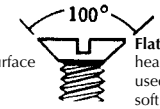

Fillister-deep slot used for counter bored holes.

Flat Fillister-same as standard fillister without oval top.

Flat 82∞-used where flush surface is desired.

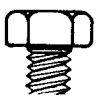

Flat 100∞-larger head than 82∞--used for thin metal soft plastic.

Flat Trim-same as 82∞ except diameter and countersink depth reduced.

Flat Undercut-standard 82∞ with lower 1/3 countersink removed for short screws.

Hexagon-manufactured as trim hex or indented hex.

Hex Washer-same as hexagon with washer section.

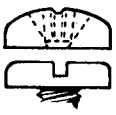

Oval-same as flat head with rounded surface for appearance.

Oval Trim-same as oval—smaller diameter and countersink.

Oval Undercut-similar to flat undercut with rounded surface.

Pan-recommended to replace round, truss binder.

Round-general purpose (See pan head)

Round Countersunk—bolts only-similar to flat head with no driving recess

Round Washer-same as round head with integral washer for bearing surface

Square-bolts only --large bearing surface for wrench tightening.

Square Countersunk --for use on plow bolts.

Square (Set Screw) --recommended for high torque assembly.

Truss-similar to round head with larger diameter (See pan head)

Over 90% of all Car and Truck Servicing involves replacement of Bolts - Nuts - Clips and many other fastening items. Small things in themselves, yet so fundamental to efficient operation. A First Class Repair Job insuring top performance of any vehicle depends upon the material and precision of "the Small Things" - the Special Part. CAR-PAK Parts are quality items of High Tensile Strength and Precision Fit. They are made right, to fit right and last longer.
